

Microsoft 365 Protection

Complete protection for Exchange Online, OneDrive, SharePoint and Teams data

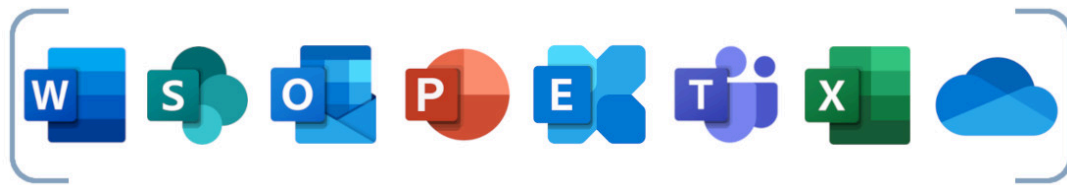

Microsoft 365 Protection provides backup and recovery for complete protection and an additional layer of data protection

Simple, flexible and scalable managed backup perfectly designed for Microsoft 365 backup and recovery.

Microsoft 365 Protection enables organisations to protect data across the entire Office 365 portfolio in a cloud storage target of their choice. The service helps organisations maintain business continuity and to safeguard against accidental or deliberate data loss.

Developed for complete elasticity, it can be consumed by organisations of all sizes. This enables smaller and midsized organisations to benefit from an enterprise-grade M365 cloud backup solution.

Fully Managed

From service inception to on-going monitoring and management, we guarantee data protection and recovery success, with comprehensive service levels

Pay as you Go

Flex up or down with a simple pricing structure based on the number of users protected

No Vendor Lock-in

The M365 Protection platform gives customers complete control over where protected data is stored or recovered to, in or out of place

Secure By Design

Data encryption in-flight and at-rest, source traffic control, advanced ransomware detection, alerting and prevention features
